

Dyna-Slide®

The most gentle name in materials handling.

DYNA-SLIDE BRUSHLON

TYPICAL APPLICATIONS

- Glass
- Plastic Parts
- Bars/Tubes
- Bearings
- Castings
- Forgings
- Ceramic Parts
- Stampings
- Electronics
- Packages
- Machined Parts
- Motors & Drives
- Green Powdered Metals**

**Brush surface equals NO Scarring, Marring or Scratching*

Dyna-Slide®

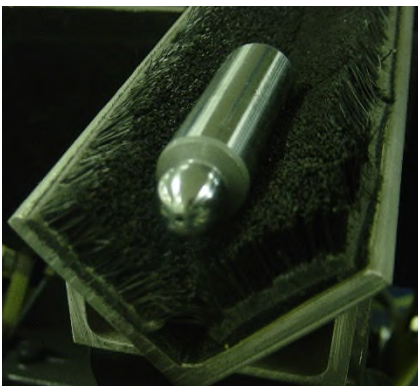

20° Fiber Brush on the surface of vibratory conveyors, linear feeders, accumulators and bowl feeders can move parts more quickly, more gently and with less noise than rotary turntables, belts or other feeder surfaces

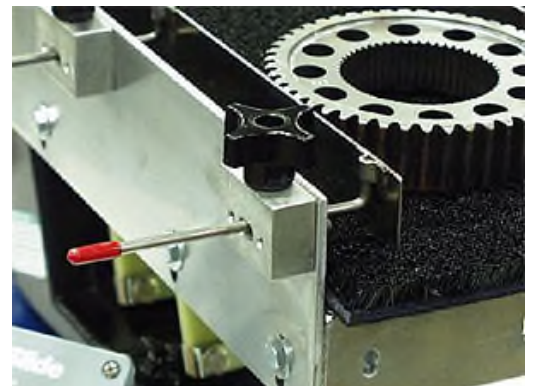

Fragile or polished parts move with less chance of breakage or surface damage

Accumulate green parts with minimal or no damage.

Resin-filled backing helps to dampen noise. A typical Dyna-Slide operates at less than 65 dba meaning a quieter work area. Rugged, replaceable surface means longer equipment life, even with heavy parts.

Brushlon -Wet or Dry Applications

331B (20° fiber tilt)
11

**Nylon Short Trim Products:
320B, 321B, 331B***

Characteristics	Typical Applications
Very high density nylon fiber in straight or 20° orientation	<ul style="list-style-type: none"> • Sound deadening • Vibratory bowl feeder lining • Vibratory conveying • Carrier roll covering • OEM applications
Green	
Flexible urethane type 1 for high tensile, low stretch	

731B (20° fiber tilt)
13

**Polypropylene Fiber Products:
720B, 721B, 730B, 731B***

Characteristics	Typical Applications
Polypropylene fiber in straight or 20° orientation unaffected by most chemicals	<ul style="list-style-type: none"> • Vibratory bowl feeder lining • Vibratory conveying • Wood panel dusting • Conveyor belt cleaning • Scrub brushes • OEM applications
Most inexpensive Brushlon form	
Black	
Flexible urethane type 1 for high tensile, low stretch
